

YOLO/SOLANO AIR QUALITY
MANAGEMENT DISTRICT

2018 Annual Report
(For calendar year 2017 emissions)

Air Toxics “Hot Spots”
Information & Assessment Act

October 10, 2018

YOLO-SOLANO
AIR QUALITY MANAGEMENT DISTRICT

I. INTRODUCTION

The Yolo-Solano Air Quality Management District (District) has prepared this annual report in accordance with the Air Toxics “Hot Spots” Information and Assessment Act (AB2588, 1987, Connelly).

This report was presented at a public hearing at the October 11, 2018 Board meeting.

BACKGROUND

The Air Toxics “Hot Spots” Information and Assessment Act (AB 2588, 1987, Connelly) was enacted in 1987, and requires stationary sources to report the types and quantities of certain substances routinely released into the air. The goal of the “Hot Spots” program was to collect emission data, to identify facilities having localized impacts, to ascertain health risks, to notify nearby residents of significant risks, and to reduce those significant risks to acceptable levels.

The District implemented this program in the 1990s and this program had not required a lot of work over the next decade. However, as detailed in the 2015 Annual report, with changes from the Office of Environmental Health Hazard Assessment (OEHHA) to the risk Guidance Manual for the Preparation of Risk Assessments, it became necessary for the District to reevaluate all of our facilities that are subject to the program.

The following are the major steps of the program:

- Identify which facilities the Act is applicable to
- These facilities must prepare an emission inventory
- The District analyzes the inventory and performs a prioritization
- High priority facilities must prepare a Health Risk Assessment (HRA)
- For high risk facilities the district must perform public notification
- Very high risk facilities must perform risk reduction

II. FACILITIES

The Emission Inventory Criteria and Guidelines specify which facilities must be evaluated. One criterion is if a facility has criteria pollutant emissions (excluding Carbon Monoxide (CO)) over 10 tons in a year. Our District interprets this requirement to mean actual emissions, not the potential to emit (PTE). A second criterion is if a facility is in a source category identified in Appendix E.

The Guidelines specify that a facility that has been over the criteria pollutant threshold or is in a listed category can get out of the program if they make reductions or changes that are ‘permanent and enforceable’. Our District interprets that to mean that a facility can get out if they modify their Permits to Operate (PTOs) such that they reduce their PTE to less than the threshold(s).

Starting with the 2015 annual report, we used calendar year 2014 as the baseline to determine facilities with actual emissions over the 10 ton threshold. Once a facility was over the actual emissions threshold of 10 tons, they will remain in the program even if their subsequent actual emissions drop below 10 tons. For all facilities that have potential emissions over 10 tons, they are checked annually to determine if they ever have actual emissions over the threshold, at which point they will be added into the program.

The following is a summary of the number of facilities in our District to which the Act applies (once a facility is confirmed to be subject to the program, it is no longer counted in the number of ‘possible facilities’ – the possible facilities are additional facilities that may be subject in the future):

Core facility		
Qualifier	Confirmed facilities	Possible facilities
> 10 tons/year criteria pollutant	17	42

Appendix E			
SIC Code	Process Description	Confirmed facilities	Possible facilities
Any	Metal platers using cadmium or chromium	0	0
Any	Facilities using ethylene oxide for sterilization	0	0
Any	Facilities with cooling towers using hexavalent chromium	0	0
Any	Facilities that perform degreasing	0	0
Any	Facilities using incinerators that burn hazardous, municipal, or biomedical waste (including animal crematoria), or burning tires	0	0
Any	Long term asbestos removal (over one year)	0	0
Any	Treatment, storage, disposal, and recycling facilities (TSDFs; TSDR facilities)	0	0
Any	Facilities using 1,4-Dioxane where emissions exceed 85 pounds per year of 1,4-Dioxane	0	0
Any	Facilities where combustion of crude, residual, distillate, or diesel oil occurs in excess of 3,000 gallons per year total at the facility, or the facility operates any number of diesel engines for more than 20 hours per year combined total at the facility	102	191
Any	Facilities using styrene or styrene compounds where emissions exceed 1,000 pounds per year of styrene or styrene compounds.	3	1
Any	Facilities using methylene chloride for paint or	0	1

Appendix E			
SIC Code	Process Description	Confirmed facilities	Possible facilities
	coating removal, where usage of methylene chloride exceeds 6 gallons per year.		
Any	Facilities identified by districts under section II.E.(3)(a).	12	3
0723	Crop preparation services for market, if fumigation is performed using ethylene oxide, propylene oxide, or methyl bromide.	0	11
1442-1446	Construction sand and gravel mining, if asphalt products are also used or produced at the facility.	2	1
2221, 3229	Fiberglass and various fiberglass materials and products manufacturing facilities within SICs 2221 and 3229.	0	0
2611, 2621, [2631]	Pulp and paper mills.	0	0
2711-2771, 2782	Printing and publishing including print shops and miscellaneous commercial printing	2	2
2812-2899	Chemicals and allied products manufacturing.	5	0
2911-2999	Petroleum refining and related industries.	3	2
3011-3089, [3293],[3555]	Rubber and miscellaneous plastics products manufacturing, if a listed substance is used in a blowing agent, plasticizer, or diluent, or is present as free monomer.	0	2
2471-3479	Miscellaneous plating, polishing, coating, engraving, and allied services, if using hexavalent chromium, nickel, or cadmium; or thermal spraying using chromium or nickel.	1	0
3674	Semiconductors and related devices manufacturing.	0	0
3731-3732	Boat and ship building and repair.	0	0
4952	Wastewater treatment facilities (including publicly owned treatment works, POTWs).	2	0
4953	Refuse systems, where landfill gas emissions of vinyl chloride exceed 8.5 pounds per year.	0	1
5171-5172	Petroleum bulk stations and terminals and related wholesalers.	3	0
5511-5521, [7531], 7532, [7535]	Auto body shops (including new and used car dealers where surface coating occurs).	76	0
5541 or any	Facilities where any retail sale of gasoline occurs.	49	0
7216 or any	Dry cleaners using perchloroethylene.	1	0
7261	Funeral services with crematories	1	0
8011-8099	Medical services, hospitals, and related facilities,	0	6

Appendix E			
SIC Code	Process Description	Confirmed facilities	Possible facilities
	if formaldehyde emissions exceed 110 pounds per year, or if sterilization occurs as described under "Any SIC" for "Facilities using ethylene oxide for sterilization", above.		
Subtotal		263	220

For a detailed list of the facilities to which the Hot Spots program is applicable, see Appendix A.

III. ANNUAL REPORT

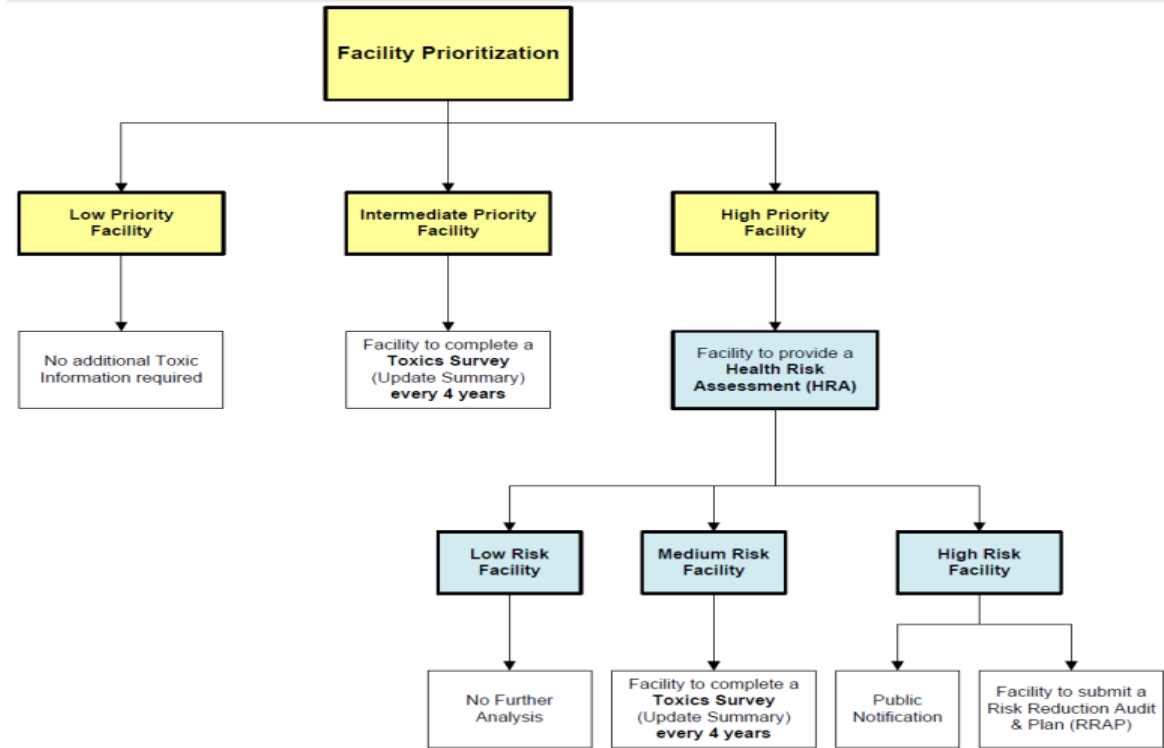

The California Health & Safety Code (CH&SC) 44363 requires that:

- (a) Commencing July 1, 1991, each district shall prepare and publish an annual report which does all of the following:
 - (1) Describes the priorities and categories designated pursuant to Section 44360 and summarizes the results and progress of the health risk assessment program undertaken pursuant to this part.
 - (2) Ranks and identifies facilities according to the degree of cancer risk posed both to individuals and to the exposed population.
 - (3) Identifies facilities which expose individuals or populations to any noncancer health risks.
 - (4) Describes the status of the development of control measures to reduce emissions of toxic air contaminants, if any.
- (b) The district shall disseminate the annual report to county boards of supervisors, city councils, and local health officers and the district board shall hold one or more public hearings to present the report and discuss its content and significance.

This report was prepared to meet this statutory requirement.

A. PRIORITIES AND CATEGORIES

The "Hot Spots" Act requires air pollution control and air quality management districts (districts) to prioritize facilities to determine which facilities must perform a health risk assessment. These facilities, for purposes of risk assessment, are ranked into high, intermediate, and low priority categories. Each district is responsible for establishing the prioritization score threshold at which facilities are required to prepare a health risk assessment. In establishing priorities, the districts are to consider the potency, toxicity, quantity, and volume of hazardous materials released from the facility, the proximity of the facility to potential receptors, and any other factors that the district determines may indicate that the facility may pose a significant risk.

In order to assist the districts with this requirement, the California Air Pollution Control Officers Association (CAPCOA) Toxics and Risk Management Advisory Committee (TARMAC), in cooperation with the Office of Environmental Health Hazard Assessment (OEHHA) and the Air Resources Board (ARB), developed the Air Toxics “Hot Spots” Program, Facility Prioritization Guidelines (July 1990). During this past year, CAPCOA updated the prioritization guidance, and released a revised guidance in August 2016. The purpose of the guideline is to provide districts with suggested procedures for prioritizing facilities. However, districts may develop and use prioritization methods which differ from the CAPCOA guidelines.

Our District uses the following priorities and categories:

- Unprioritized – a facility to which the Act is applicable, but for which a prioritization score hasn’t yet been calculated
- Low Priority – a facility with a prioritization score equal to or less than 1
- Intermediate Priority – a facility with a prioritization score greater than 1 but equal to or less than 10
- High Priority – a facility with a prioritization score greater than 10

In 2016, the District evaluated our retail gasoline dispensing facilities. In 2017, the District evaluated all of our facilities that operated diesel engines over 20 hours per year:

Category	Facility Type	# of sources
Low Priority	GDF	41

	Diesel Engines	18
Intermediate Priority	GDF	*
	Diesel Engines	54
High Priority	GDF	*
	Diesel Engines	30

*Any GDFs that were intermediate or high priority have had a Health Risk Assessment performed by the District and therefore are identified under the next section.

B. RANKING OF FACILITIES BY CANCER RISK

GDFs are considered “Industry Wide sources”, so the District ran the health risk assessments for the sources.

Category	Facility Type	# of sources
Low Risk	GDF	50
Intermediate Risk	GDF	25
High Risk	GDF	0

The 30 facilities operating diesel engines over 20 hours which are high priority facilities have been notified that a health risk assessment is required. These facilities will have 6 months to submit a HRA, or they can pay the District to do the HRA for them. Once the results are received, they will be published in the next subsequent annual report.

The 45 facilities operating diesel engines over 20 hours which are intermediate priority facilities have been notified that they can either do a health risk assessment (to try and show that the risk is low), or they can remain a “tracking” facility where they are in the program and perform an update every four years.

C. RANKING OF FACILITIES BY NONCANCER RISK

None of the GDFs have a noncancer score over 1.

As with the cancer risk, once the high priority diesel engine facilities have performed a HRA, the noncancer risk results will be published.

D. DEVELOPMENT OF CONTROL MEASURES

During calendar year 2017, the District did not develop any control measures, however staff expended resources implementing and enforcing State and Federal control measures. Staff is also participated in the ARB process to amend the Portable Diesel Engine ATCM.

IV. STEPS TAKEN

In the past year District staff performed the following work related to this program:

- Evaluated 103 diesel engine facilities
- Calculated 2017 actual emissions for the sources that have a potential to emit over 10 tons
- Sent an invoice for 'unprioritized' fees to the 10 ton facilities confirmed to be subject to the program
- Sent an invoice for 'unprioritized' fees to all diesel engine facilities that operated over 20 hours per year
- Requested an inventory plan and report from each of the 13 core facilities. The District is in the process of receiving and reviewing these documents.

IV. NEXT STEPS

In the current fiscal year (FY2018/2019), District staff plans to perform the following work related to this program:

- Continue working to obtain, review and approve an emission inventory plan and report from facilities with actual emissions over 10 tons per year
- Obtain information from the 'possible sources' to determine whether they are actually subject to the program
- Obtain coating information from the autobody shops
- Prioritize the autobody shops
- Continue prioritizing the diesel engine facilities

APPENDIX A
FACILITIES TO WHICH THE "HOT SPOTS" ACT APPLIES

Facilities with actual emissions of Nitrogen Oxides (NOx), Volatile Organic Compounds (VOCs), Sulfur Oxides (SOx), or Particulate Matter less than 10 microns (PM10) over 10 tons:

ACTUAL EMISSIONS OVER 10 TONS*						
Facility ID	Company Name	Location	Pollutant	PTE	Actual	Year
01681	Northern Recycling Compost	11220 County Road 94, Zamora	VOC	1707.79	1427.61	2014

*Facility IDs 00281 (Davis Truck Painting) and 05481 (Ramos Oil Company) were removed from this table because they modified their permits and reduced their potential emissions to less than 10 tons per year.

Facilities listed in a category of Appendix E

Appendix E lists different ways (other than actual emissions over 10 tons per year) which a facility can be subject to the Hot Spots Act. On the following pages, the District has identified our facilities that are subject (or potentially subject) to the hotspots program because of one of these categories. If a category from Appendix E isn't listed, it's because we don't have any facilities subject to the Hot Spots Act because of that category.

Facilities where combustion of crude, residual, distillate, or diesel oil occurs in excess of 3,000 gallons per year total at the facility, or the facility operates any number of diesel engines for more than 20 hours per year (excluding emergency use) combined total at the facility				
The District has split this table into 3 sub tables:				
<ul style="list-style-type: none"> - Facilities with diesel engines, but which are subject to the program for other reasons - Facilities which have exceeded 20 hours of diesel engine usage in a year after 2014 - Facilities which have not exceeded 20 hours of diesel engine usage in any year after 2014 				
Facility ID	Company Name	Location	Hours	Year
00025	University of California, Davis	Campus Area, Davis	Subject to the AB2588 because of actual emissions over 10 tons.	
00257	Woodland Biomass Power Ltd.	1786 East Kentucky Avenue, Woodland	Subject to the AB2588 because of actual emissions over 10 tons.	
05084	ALZA Corporation	700 Eubanks Drive, Vacaville	Subject to the AB2588 because of actual emissions over 10 tons.	
05341	Recology Hay Road	6426 Hay Road, Vacaville	Subject to the AB2588 because of actual emissions over 10 tons.	
05495	Jepson Prairie Organics Compost Facility	6426 Hay Road, Vacaville	Subject to the AB2588 because of actual emissions over 10 tons.

*Facility IDs 00532 (Frontier Ag Co. Inc) and 00550 (Clark Pacific) were removed from this table because they canceled their permits for IC engines

**Facility IDs 00594 (City of Davis), 00943 (City of Woodland), 01417 (University Retirement Community at Davis) and 01598 (The Jacmar Companies) were moved from this table to the next table because their previously reported hours (over 20) were reported in error. The correct actual maintenance and testing usage for each of these facilities was less than 20 hours per year.

Facilities that have not operated over 20 hours

*Facility ID 02136 (Level (3) Communications, LLC) was removed from this table as it was merged with facility ID 01247

Facilities using styrene or styrene compounds where emissions exceed 1,000 pounds per year of styrene or styrene compounds.			
Facility ID	Company Name	Location	Comments
00260	Truck Accessories Group, LLC	1686 East Beamer Street, Woodland	Subject to the AB2588 because of actual emissions over 10 tons.
00471	Clark's Classic Marble	1787 East Main Street,	This facility reported 2013 actual

Facilities using styrene or styrene compounds where emissions exceed 1,000 pounds per year of styrene or styrene compounds.			
Facility ID	Company Name	Location	Comments
		Woodland	usage at 402.4 gallons gel coat and 6,038 gallons resin. Using the emission factors used in the permitting of this facility and the emissions model, results in an estimated 4,500 lbs of styrene emissions and therefore is subject to Hot Spots.
00493	California Audio Technology	1700 Terminal Street, West Sacramento	This facility is limited to 200 gallons per year of gel coat – using the emission factors used in permitting this facility, even if they used all 200 gallons, the styrene emissions would not exceed 640 lbs in a year. Therefore, the Hot Spots program is not applicable to this facility because of this source category.
01263	Farallon Boats	504 Harbor Boulevard, West Sacramento	This facility reported 2015 usage of 1524 lbs gel coat and 15516 lbs resin. Using the Composite Fabricators Association (CFA) model, the styrene emissions are estimated at ~1060 lbs for 2015 and therefore is subject to Hot Spots.
01505	Huki	2910 Duluth Street, West Sacramento	This facility reported 2016 usage of 266 gallons of resin, 332 gallons of gelcoat, 12 gallons of catalyst, and 12 gallons of mold release. Using the CFA model, the styrene emissions are estimated at ~1,202 lbs for 2016 and therefore is subject to Hot Spots.

Facilities using methylene chloride for paint or coating removal, where usage of methylene chloride exceeds 6 gallons per year.

Facility ID	Company Name	Location	Comments
05220	Ron Dupratt Ford	1320 North First Street, Dixon	Permitted to emit 190 lbs MeCl (17.1 gallons), but we need to determine how much they emitted in 2016
01421	Caliber Body Works, Inc.	711 Harbor Boulevard, West Sacramento	This facility is subject to HHHHHH, but is prohibited by permit condition from using MeCl.
01511	Penske Truck Collision Repair	1954 East Main Street, Woodland	This facility is subject to HHHHHH, but is prohibited by permit condition from using MeCl.

Under section II.E.(3)(a) of the guidelines, the District may identify sources which the district determines pose a potential risk to public health. The District is required to make a written determination that 1) there is a reasonable basis for determining that the facility may pose a potential risk to public health exceeding the levels for prioritization score, cancer, or non-cancer risk, and 2) detailed toxic emission data are needed to completely evaluate potential health risk to surrounding receptors.

With this annual report, our District is making the written determination that the following categories pose a potential risk:

- Plasma and laser cutting tables, at facilities under any SIC code
- Fumigation operations using ethylene oxide, propylene oxide, or methyl bromide, at facilities under any SIC code other than 0723
- Wood treating facilities, under SIC code 2491

Facilities identified by districts under section II.E.(3)(a) – plasma/laser tables				
Facility ID	SIC Code	Company Name	Location	Comments
00085	3441	Gayle Manufacturing Company	1455 East Kentucky Avenue, Woodland	This facility is subject to Hot Spots because of this category

SIC Codes 1442-1446		Construction sand and gravel mining, if asphalt products are also used or produced at the facility.	
Facility ID	Company Name	Location	Comments
00011	Syar Industries, Inc.	16560 County Road 89, Madison	Syar has an active PTO for asphalt batching at this location, but did not operate the asphalt batch plant in 2016 (hasn't operated since 2010)
00406	CEMEX Construction Materials Pacific, LLC	30288 State Highway 16, Madison	This facility is subject to Hot Spots because of this category
00013	Teichert Aggregates	35030 County Road 20, Woodland	This facility is subject to Hot Spots because of this category

SIC Codes 2711-2771, 2782		Printing and publishing including print shops and miscellaneous commercial printing.	
		Facilities using an annualized average of two gallons per day or less (or 17 pounds per day or less) of all graphic arts materials (deducting the amount of any water or acetone) are excluded.	
Facility ID	Company Name	Location	Comments
00256	QG Printing II, LLC.	1201 Shore Street, West Sacramento	Reported ink usage for 2014 was 2.66 million pounds of ink. Dividing the ink usage by 365 gives a daily average of over 7,000 pounds of ink per day
01115	Delta Web Printing, Inc.	1871 Enterprise Boulevard, West Sacramento	Reported ink usage for 2014 was 28,765 lbs of ink, 180 gallons of fountain solution, and 180 gallons of cleanup solvent. Dividing the ink usage by 365 days gives a daily average of 78 pounds of ink per day
01322	Volume Press	1348 Terminal Street, West Sacramento	This facility emitted 889 lbs of VOCs in 2016, which would equate to 2.4 lbs of VOC/day. Using the rule 2.29 limit of 2.5 lbs/gal, that would be just under 1 gallon per day of ink. Therefore, the Hot Spots program is not applicable to this facility because of this source category.
01635	The Printer	2910 Cowell Boulevard, Davis	This facility reported usage for 2016 at 28 gallons of inks, 106 gallons of fountain solution, and 23 gallons of solvent wash, for a total of 157 gallons of material. Dividing that usage by 365 gives a daily average of 0.4 gallons/day, and therefore Hot Spots is not applicable.

SIC Code 2812-2899			Chemicals and allied products manufacturing.	
Facility ID	SIC Code	Company Name	Location	Comments
05453	2813	Matheson TriGas	871 Eubanks Drive, Vacaville	The only reason this facility is regulated by our agency is because of an emergency engine, which will be addressed under
